August 19th Hike Hope Heal

- 0 online screenings took place the day of the event
 - 40 online screenings the week of 8/20-26 (49% of screenings for the month)

Promotional Language

81 online mental health screenings were taken throughout the month of August. The majority of those who took a screening were female (81%) and between the ages of 25-34 (39%).

August's screening count is higher than the count for July (37 screenings), marking a **119% increase** in screening numbers over the past month. A spike in screening numbers during the week of August 20th through 26th accounts for nearly 50% of the month's screenings. This spike toward the end of the month is likely due to a combination of increased web traffic following Aspen Strong's annual Hike Hope Heal event on the 19th and people returning home from vacation at the end of August.

*Of the **62** people who scored positive for a mental health disorder, only **6** answered the optional question "Do you plan to seek help?" Of those 6 who responded, **3** reported that they did indeed intend to seek help.*
