In the month of September **48 online mental health screenings were taken**. One-third of these screenings were screenings for depression.

This 1:3 ratio of depression screenings to overall mental health screenings mirrors the trend of 2017 screenings as a whole: **from January 1st - September 30th, approximately 30% of screening taken were for depression**. Of these depression screenings, 52% had symptoms consistent with depression.

*Of the **26** people who scored positive for a mental health disorder, only **4** answered the optional question "Do you plan to seek help?" Of those 4 who responded, **all 4** reported that they did indeed intend to seek help.*
